## **DETAILED ACTION**

### **EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Brian Bianco on Monday, May 21<sup>st</sup>, 2007.

2. The application has been amended as follows:

- a. In line 7 of claim 1, the phrase "in at least a first image of an object" is removed from the claim.
- b. In line 2 of claim 26, the word "methods" is replaced with the word "method."
- c. In line 1 of claim 27, the phrase "A computer executable program" is replaced with "A computer executable program stored on a computer-readable medium."

Art Unit: 2624

3. The following is an examiner's statement of reasons for allowance:

The innovation distinction that makes the claimed invention allowable is registering the corresponding landmarks among each one dimensional digital profile map using the first and second reference points from the first and second image of an object.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

**Conclusion**

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

a. Barfus et al. (US 7,010,175) teaches a method of correlating points from a first image with points on a second image. This method may be applied with in the medical imaging field. Barfus does not teach generating one-dimensional profile plots from the first and second images.

b. Kreeger et al. (US 2005/0169507 hereinafter "Kreeger") teaches a registration or scanning data acquired from different patient positions. Kreeger teaches generating a one-dimensional profile plot of a supine view and a one-dimensional profile plot of a prone view of an organ. Kreeger also teaches using the plots to match feature points from the supine and prone views of an organ. Kreeger does not teach having features points on the original image and using those features points to register the feature points of the one-dimensional profile plots.

c. Brady et al. (US 7,120,276 hereinafter "Brady") teaches a method to process image data of a non-rigid body to correct for movements of the non-rigid body between images. Brady does not teach having features points on the original image and using those features points to register the feature points of the one-dimensional profile plots.
